Girls ROCK Technical Trades

An initiative of the Australian Technical Colleges, Plumbing Industry Association, Electrotechnology Energy Water Skills Board, Engineering Employers Association Group Training, ATEC Group Training, MTA, Regional Industry Careers Advisor & Local Community Partnerships.

Hey girls, do you get a buzz from combining practical and academic skills?

Can you imagine yourself working on million dollar projects that use technical skills and girl savvy?

Ever wanted to design a home or building, work on multi-million dollar electrical or engineering project, work with high tech equipment? Is being a leader in sustainable water resources and plumbing more where you see yourself?

Perhaps, your creative flair is more about the art of tiling, or doing something really clever like computer aided drafting? Or how about getting behind heavy equipment in the mining industry?

If the answer is yes to any of these, or you just want to know where you could fit in a technical trade in a number of exciting industries then you need to talk to girls and young women who are doing exactly that at the "Girls rock in technical trades" stand at the Career Expo, 1st & 2nd of May 2009.

We'd love to see you there because exciting industries need young women like you to grow their future.

Dream it, Do it, Live it!
